Alpha Numeric Paging Instructions

There are a number of ways to generate an alpha numeric message. Users can send messages via e-mail, the Internet and from paging software programs.

E-mail: To send a message via internet, simply create a second address for the user, i.e. Jane Doe and Jane Doe Pager. The address will follow the following format: modem#.pager#@pagenet.net.   Specifically, you will input 3147887243.XXXXXXX@pagenet.net. For each pager you will use the pager number without an area code.

Internet: To send a message from the Internet go to PageNet's home page, www.pagenet.com. On our page there is a section called "Send A Message". Go to that site. The first thing you will do is to access the drop down box and select the terminal for MO, St. Louis. The number is 314 788-7243. The second box asks for the pager pin number. For local pagers this is always the pager number entered without the area code. In the third area you can input you message. Note you cannot create an address book when sending messages from PageNet's homepage.

Paging Software: PageNet's paging software program allows you to create an address book of users and to have an alternative way to page when you do not have access to the internet or e-mail. The software does require that you have access to a PC with a modem. The software is easy to install and requires that you load the terminal number, 1 800 500 6630 and then you will create an address book of users.

Remember, all alpha numeric pagers still function like a digital pager and can receive numeric only messages sent from any touch tone telephone anywhere.
